

**Acronis True Image Home 2009:** This backup utility is a great tool to help you backup your entire hard drive and everything on it (operating system, application programs, settings, data files) or just a few key data files. You can restore your entire hard drive or just a few individual files. It also offers disk cloning for upgrading to a larger hard drive. Disk Cleanser lets you securely wipe your private data from an old drive. Other tools let you see inside of your backup files or search for files in backup images. The Try&Decide feature lets you use your computer while locking out any hard drive changes. Backups can be set to run automatically. This is a "must have" utility for all end-users.

**Acronis Disk Director Suite 10.0:** This partitioning utility is an excellent tool to help you better organize your hard drive. You can add partitions and resize partitions without losing your files on the drive. Setting up a separate data partition to give you better backups would require this utility. You can also setup and run multiple operating systems on your hard drive, letting you try Vista or Linux without giving up your WinXP. Moving and copying partitions and their content is also possible. This is a "must have" utility for accomplished computer users.
